BS Standard Stranded Copper Rod is suitable for un-insulated hook-ups, jumpers and grounds in substations

- Available in hard, medium-hard or soft (annealed) tempers
- **BS Standard Stranded Copper Rod** Conductor is used on both lightning protection and earthing systems.
- Available as soft drawn (copper wire that has been heat treated) and hard drawn (copper wire that has not been annealed after drawing).
- In use in substations as un-insulated hook ups, jumpers, and grounds.

Solid vs. stranded

Single-strand copper wire, also called solid wire or solid-core wire, consists of one piece of copper metal wire surrounded by an insulator. Single-strand copper conductors are typically used as magnet wire in motors and transformers. They are relatively rigid, do not bend easily, and are typically installed in permanent, infrequently handled, and low flex applications. Single strand copper wires also provide mechanical ruggedness and good protection against the environment.

BS Standard Stranded Copper Rod wire refers to a group of copper wires that are braided or twisted together. A stranded copper wire is more flexible and easier to install than a single-strand copper wire of the same cross section. Stranding also improves wire longevity for applications with moderate to high vibration. A particular cross-section of a stranded conductor gives it essentially the same resistance characteristics as a single-strand conductor, but with added flexibility.

Amiable Impex supply **BS Standard Stranded Copper Rod** all over India mainly at Ahmadabad, Pune, Delhi, Mumbai, Bangalore, Chennai, Kolkata, Pune, Lucknow, Kanpur, Nagpur, Indore, Bhopal, Vadodara (Baroda) etc.
